### Sugars & Spreads April 2, 2012 HONEY AND JAM

### Honey

Honey production is most active in the subarctic and temperate regions such as the former Soviet Union region (mainly Ukraine, Belarus, and Russia), China, North America, and European countries. On the other hand, at tropical and subtropical regions, there are many honey producing countries with a wide variety of backgrounds, but there are many technological issues that are

waiting to be resolved. According to Japan Beekeeping Honey Association, the numbers of beekeeping in the world is as follows. China has over 9 million bee colonies, former Soviet Union regions has nearly 9 million bee colonies, United States has over 3 million bee colonies, Mexico has nearly 3 million bee colonies, Brazil has around 2 million bee colonies, and Argentina has around 1.5 million bee colonies. The production volume of honey around the world is estimated to add up to about 1.2 million tons. Of this, China produces over 200,000 tons, former Soviet Union region produces nearly 200,000 tons, and the United States produces about 100,000 tons. These 3 regions account to nearly half of the total production of honey in the world. In this situation, Japan is importing nearly 9 billion yen on money base and 40,000 tons on quantity base every year.

We will be introducing some of the spotlight products on a country basis.

### New Zealand

Manuka honey from New Zealand has a rich and creamy texture. It includes plenty of minerals and has a bitter taste that comes from barley sugar. It is effective for your digestive organs, Helicobacter pylori, and for periodontal diseases. It also known as a high quality honey that is antibacterial, bactericidal,

# JAPAN TODAY

and antiviral. Female users are increasing their numbers because of its power to relieve constipation and power to create smooth and healthy skin. There are few other types.

### Italy

Mielizia from Italy's beekeeping cooperative, CONAPI is very popular. Its name comes from the two words "MIELE (honey)" and "DELIZIA (finest taste)". They produce two different types of flavor and taste. One is completely organic using different types of organic flowers. The other is

collected from different honey collecting spots in Italy. The organic honey from acacia is popular for its smooth texture and rich taste. It goes well with plain yogurt or fresh cheese, and it could also be used for confectionary or dressing.

The collecting areas are Piemonte and Lombardia. Since it is certified as EU organic products and the producer (beekeeping farm) or collecting spots are clearly printed, it makes the Japanese consumers feel safe. The content is 400g.

The other type is "Mielizia Chestnut Honey." The color is brown and has a glossy texture. It is rich honey with a bitter flavor that comes from chestnuts that goes well with cheese, panna cotta, and pancakes. It could also be used as a subtle seasoning for different types of dishes and it goes well with pork. The content is 400g. It is certified as EU organic products. There are other types as well.

### Switzerland

Nectarflor is a Swiss honey. According to the Swiss food laws and regulations, 100% organic product must be 100% natural, have no additives, and cannot be processed (ex. using heat treatment). Nectarflor qualifies all of this, and it has a fresh, fruity flavor. The container prevents the honey from leaking and its

content is 250g. The other is Nectarflor Honey Acacia with content of 250g.

#### Jam

JAPAN MANAGEMENT ASSOCIATION FOODEX JAPAN Secretariat

# JAPAN TODAY

The import volume of Jam in 2011 increased 8.6% from the previous year. Because of the strong yen, each agency actively lowered the price and increased the sales of jam. Starting with blueberries, the prices for some of the ingredients became more stable and some products dropped the manufacturer's recommended price. The demand for imported

際食品·飲料展

jam with fruit pulp is not only increasing at high-class food specialty stores or department stores, but also at general volume sellers. This indicates an increase in chances of starting new businesses. There are worries for an increase in price for sugar, fruits, containers, and ingredients, but it is a stable market with hope.
